

Multiplier Event

“Social and Economic Empowerment of Migrant Women” - WINGS

Erasmus+ Programme – Strategic Partnership

AGREEMENT N°: 2020-1-NL01-KA204-064669

The wonderful WINGS Training came to an end with the Multiplier event which took place on Friday, 20th May 2022 at The Meeting Place in Marsa Malta. The event started at 18:00 hrs according to the participant's wishes.

Maryrose as the local project manager welcomed the participants and introduced the W-lap participants. Then Monika Kopcilova proceeded by giving a presentation of the WINGS Project and its aims and objectives,

She also took the opportunity to show the elearning platform and encouraged those present to log on the platform and avail themselves of the online resources online.

Next on the agenda was the experience of the W-Lap from some of the participants, which took the form of a panel discussion moderated by Melissa Muscat. The feedback from those who participated in the training was amazing and everyone was very happy and satisfied with the outcome of the training. It was then the trainers' turn to speak about their experiences and lessons learnt. The biggest lesson learnt was

that being a migrant does not automatically make you unskilled and low level education. In our group we had a PhD graduate, an engineer, two dentists, an HR Consultant and an entrepreneur. The ladies created a network between themselves, and they are helping each other. The trainers also spoke about the multimedia booklet.

During the registration process some of the ladies insisted that they do not want to be in the photographs even though we promised to take them from the back. So we asked them to get up from their seat until we could take some photos for reporting purposes. The evening progressed by a very animated Q & A session where the Skills Zone team where asked questions about the project.

The Multiplier event finished with a networking reception where those who attended interacted with each other. Apart from learning about the Maltese Culture, where to look for a job and the content of all the other modules, they have created wonderful friendships which will last far beyond the projects timeline.
